Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications)

Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications)

Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications)
Artificial Vision is a rapidly growing discipline, aiming to build computational models of the visual functionalities in humans, as well as machines that emulate them. Visual communication in itself involves a numberof challenging topics with a dramatic impact on contemporary culture where human-computer interaction and human dialogue play a more and more significant role.

This state-of-the-art book brings together carefully selected review articles from world renowned researchers at the forefront of this exciting area. The contributions cover topics including image processing, computational geometry, optics, pattern recognition, and computer science. The book is divided into three sections. Part I covers active vision; Part II deals with the integration of visual with cognitive capabilities; and Part III concerns visual communication.

Artificial Vision will be essential reading for students and researchers in image processing, vision, and computer science who want to grasp the current concepts and future directions of this challenging field.

Key Features
* This state-of-the-art book brings together selected review articles and accounts of current projects from world-renowned researchers at the forefront of this exciting area; The contributions cover topics such as:
* psychology of perception
* image processing
* computational geometry
* visual knowledge representation and languages
* It is this truly multi-disciplinary approach that has produced successful theories and applications for the subject.

From reader reviews:

Thelma Burke:

Typically the book Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications) will bring you to the new experience of reading the book. The author style to explain the idea is very unique. When you try to find new book you just read, this book very ideal to you. The book Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications) is much recommended to you to learn. You can also get the e-book through the official web site, so you can quicker to read the book.

Lisa Langlais:

A lot of people always spent their very own free time to vacation or perhaps go to the outside with them household or their friend. Are you aware? Many a lot of people spent many people free time just watching TV, or maybe playing video games all day long. In order to try to find a new activity honestly, that is look different you can read a book. It is really fun in your case. If you enjoy the book that you just read you can spent the whole day to reading a reserve. The book Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications) it doesn't matter what good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. In the event you did not have enough space to bring this book you can buy the particular e-book. You can m0ore quickly to read this book from the smart phone. The price is not to cover but this book provides high quality.

Ruth Coleman:

Many people spending their time period by playing outside using friends, fun activity with family or just watching TV all day every day. You can have new activity to shell out your whole day by looking at a book. Ugh, you think reading a book can definitely hard because you have to take the book everywhere? It all right you can have the e-book, getting everywhere you want in your Smart phone. Like Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications) which is keeping the e-book version. So , try out this book? Let's observe.

Victor Havens:

As we know that book is important thing to add our know-how for everything. By a publication we can know everything we wish. A book is a group of written, printed, illustrated or blank sheet. Every year had been exactly added. This book Artificial Vision: Image Description, Recognition, and Communication (Signal Processing and its Applications) was filled concerning science. Spend your extra time to add your knowledge about your technology competence. Some people has diverse feel when they reading a book. If you know how big benefit from a book, you can experience enjoy to read a reserve. In the modern era like today, many ways to get book you wanted.
