**Biochemical Techniques in the Heart (Methods in Life Sciences - Pharmacology Section)** John H. McNeill

Biochemical Techniques in the Heart fully describes classical biochemical measurements of parameters involved in contraction and relaxation in the heart. This fully detailed guide tells you how to make preparations of sarcoplasmic reticulum, sarcolemma, and cardiomyocytes and how to measure sodium-calcium and sodium-hydrogen exchange. Two chapters explain the measurement of the important enzyme sodium-potassium ATPase.

This book examines the most widely used tools in experimental cardiology and provides you with the recipe-setting up the technique, procurement of equipment, sample data and calculations, problems and trouble shooting, adapting to other species, modifications, and applicability. Undoubtedly, this text will be a great asset to cardiovascular physiologists, pharmacologists, experimental cardiologists, and students of physiology and pharmacology.
