## Compound Semiconductor Radiation Detectors (Series in Sensors) Alan Owens

Although elemental semiconductors such as silicon and germanium are standard for energy dispersive spectroscopy in the laboratory, their use for an increasing range of applications is becoming marginalized by their physical limitations, namely the need for ancillary cooling, their modest stopping powers, and radiation intolerance. Compound semiconductors, on the other hand, encompass such a wide range of physical and electronic properties that they have become viable competitors in a number of applications. **Compound Semiconductor Radiation Detectors** is a consolidated source of information on all aspects of the use of compound semiconductors for radiation detection and measurement.

### *Serious Competitors to Germanium and Silicon Radiation Detectors*

Wide-gap compound semiconductors offer the ability to operate in a range of hostile thermal and radiation environments while still maintaining sub-keV spectral resolution at X-ray wavelengths. Narrow-gap materials offer the potential of exceeding the spectral resolution of germanium by a factor of three. However, while compound semiconductors are routinely used at infrared and optical wavelengths, their development in other wavebands has been plagued by material and fabrication problems. So far, only a few have evolved sufficiently to produce commercial detection systems.

### *From Crystal Growth to Spectroscopic Performance*

Bringing together information scattered across many disciplines, this book summarizes the current status of research in compound semiconductor radiation detectors. It examines the properties, growth, and characterization of compound semiconductors as well as the fabrication of radiation sensors, with particular emphasis on the X- and gamma-ray regimes. It explores the limitations of compound semiconductors and discusses current efforts to improve spectral performances, pointing to where future discoveries may lie.

A timely resource for the established researcher, this book serves as a comprehensive and illustrated reference on material science, crystal growth, metrology, detector physics, and spectroscopy. It can also be used as a textbook for those new to the field of compound semiconductors and their application to radiation detection and measurement.

### **From reader reviews:**

#### **Micheal Summers:**

Hey guys, do you would like to finds a new book you just read? May be the book with the title Compound Semiconductor Radiation Detectors (Series in Sensors) suitable to you? Often the book was written by well known writer in this era. The particular book untitled Compound Semiconductor Radiation Detectors (Series in Sensors)is one of several books in which everyone read now. This particular book was inspired many men and women in the world. When you read this book you will enter the new dimensions that you ever know ahead of. The author explained their plan in the simple way, so all of people can easily to comprehend the core of this guide. This book will give you a lot of information about this world now. To help you see the represented of the world in this book.

#### **Virginia Villalon:**

Reading a book can be one of a lot of action that everyone in the world really likes. Do you like reading book thus. There are a lot of reasons why people like it. First reading a guide will give you a lot of new information. When you read a book you will get new information simply because book is one of many ways to share the information or maybe their idea. Second, examining a book will make you actually more imaginative. When you looking at a book especially tale fantasy book the author will bring you to imagine the story how the characters do it anything. Third, you are able to share your knowledge to other people. When you read this Compound Semiconductor Radiation Detectors (Series in Sensors), it is possible to tells your family, friends and soon about yours publication. Your knowledge can inspire the others, make them reading a book.

#### **Richard Pease:**

Reading a book tends to be new life style with this era globalization. With studying you can get a lot of information that will give you benefit in your life. With book everyone in this world could share their idea. Publications can also inspire a lot of people. A lot of author can inspire their particular reader with their story or perhaps their experience. Not only situation that share in the textbooks. But also they write about the data about something that you need illustration. How to get the good score toefl, or how to teach your children, there are many kinds of book that exist now. The authors nowadays always try to improve their talent in writing, they also doing some investigation before they write with their book. One of them is this Compound Semiconductor Radiation Detectors (Series in Sensors).

#### **Verna Krell:**

What is your hobby? Have you heard this question when you got students? We believe that that concern was given by teacher to their students. Many kinds of hobby, Every individual has different hobby. And also you know that little person just like reading or as reading through become their hobby. You need to know that reading is very important as well as book as to be the factor. Book is important thing to provide you

knowledge, except your own personal teacher or lecturer. You get good news or update regarding something by book. Numerous books that can you take to be your object. One of them are these claims Compound Semiconductor Radiation Detectors (Series in Sensors).
