Intrinsically Motivated Learning in Natural and Artificial Systems

Intrinsically Motivated Learning in Natural and Artificial Systems

Intrinsically Motivated Learning in Natural and Artificial Systems

It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self-improvement. To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence, and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity, interest in novel stimuli or surprising events, and interest in learning new behaviours. The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish ?tness-enhancing goals. Intrinsic motivations continue during adulthood, and in humans they underlie lifelong learning, artistic creativity, and scientific discovery, while they are also the basis for processes that strongly affect human well-being, such as the sense of competence, self-determination, and self-esteem.

This book has two aims: to present the state of the art in research on intrinsically motivated learning, and to identify the related scientific and technological open challenges and most promising research directions. The book introduces the concept of intrinsic motivation in artificial systems, reviews the relevant literature, offers insights from the neural and behavioural sciences, and presents novel tools for research. The book is organized into six parts: the chapters in Part I give general overviews on the concept of intrinsic motivations, their function, and possible mechanisms for implementing them; Parts II, III, and IV focus on three classes of intrinsic motivation mechanisms, those based on predictors, on novelty, and on competence; Part V discusses mechanisms that are complementary to intrinsic motivations; and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations.

The contributing authors are among the pioneers carrying out fundamental work on this topic, drawn from related disciplines such as artificial intelligence, robotics, artificial life, evolution, machine learning, developmental psychology, cognitive science, and neuroscience. The book will be of value to graduate students and academic researchers in these domains, and to engineers engaged with the design of autonomous, adaptive robots.

From reader reviews:

Leslie Heidelberg:

As people who live in the particular modest era should be upgrade about what going on or facts even knowledge to make them keep up with the era and that is always change and move ahead. Some of you maybe will update themselves by looking at books. It is a good choice for you personally but the problems coming to anyone is you don't know what one you should start with. This Intrinsically Motivated Learning in Natural and Artificial Systems is our recommendation to help you keep up with the world. Why, because this book serves what you want and need in this era.

Freddy Lamberth:

The publication with title Intrinsically Motivated Learning in Natural and Artificial Systems includes a lot of information that you can discover it. You can get a lot of gain after read this book. That book exist new know-how the information that exist in this e-book represented the condition of the world now. That is important to yo7u to learn how the improvement of the world. This book will bring you inside new era of the the positive effect. You can read the e-book on the smart phone, so you can read the idea anywhere you want.

Jamie Treat:

Your reading 6th sense will not betray you, why because this Intrinsically Motivated Learning in Natural and Artificial Systems e-book written by well-known writer we are excited for well how to make book that may be understand by anyone who all read the book. Written inside good manner for you, leaking every ideas and writing skill only for eliminate your current hunger then you still hesitation Intrinsically Motivated Learning in Natural and Artificial Systems as good book not only by the cover but also through the content. This is one e-book that can break don't judge book by its include, so do you still needing one more sixth sense to pick this!? Oh come on your reading sixth sense already said so why you have to listening to another sixth sense.

Rachel Daniels:

A lot of publication has printed but it takes a different approach. You can get it by internet on social media. You can choose the very best book for you, science, witty, novel, or whatever through searching from it. It is named of book Intrinsically Motivated Learning in Natural and Artificial Systems. You can contribute your knowledge by it. Without departing the printed book, it may add your knowledge and make you happier to read. It is most important that, you must aware about guide. It can bring you from one spot to other place.
